Rizwan Razik

AI Engineering Graduate

Stockholm, Sweden | rizwanrazik724@gmail.com | +46 769750887 | Portfolio | Linkedin | rizwan0110

AI Engineering graduate with hands-on experience in machine learning and LLM-based systems, developed through academic projects, applied research, and industry collaboration. Strong background in Python and applied AI, with experience working on real-world problems involving data analysis, model development, and system evaluation.

Technical Skills

Languages & Tools: Python , C++ , SQL, Git, KNIME, PowerBI, n8n, Cursor

AI/ML & Frameworks: Scikit-learn, PyTorch, TensorFlow, Keras, LangChain, Hugging Face, Pandas, NumPy, Seaborn

Cloud & Deployment: Azure AI Services (AI Foundry, AI Search, WebApps),GCP (Vertex AI), Linux

Work Experience

Master Thesis Student, Volvo Construction Equipment — Eskiltuna, Sweden — 01/2025 – 06/2025

- Designed and implemented a persona-based RAG chatbot prototype to support exploration and analysis of customer personas for stakeholders.
- Generated synthetic customer personas using prompting techniques.
- Presented and documented research findings and demo to Volvo CE engineers.

AI Research & Development Intern, PerformanceX — Remote — 08/2024 – 09/2024

- Conducted data collection and preprocessing from expert interviews and articles.
- Designed and built an AI coaching app using RAG to support athletes.
- Tested with multiple LLMs and evaluated their performance manually.

Software Engineer, Allianz Technology — Trivandrum, India — 03/2022 – 06/2023

- Resolved technical issues for AZDMS, achieving a 98% SLA resolution rate.
- Installed, upgraded, and configured IBM FileNet P8 on Linux
- Applied Agile methodologies to manage CPI across global FileNet installations.

Projects

Warehouse Robotics Path Optimization using Q-Learning

- Trained a Q-learning RL model for autonomous warehouse navigation on a 15×15 grid with real-time GUI.

Cable Drum Reusability Classification – Drumster

- Built a VGG16-based CNN with Grad-CAM to classify reusable cable drums (88% accuracy, 92% F1-score).

Customer Churn Prediction – Skogsro Spa

- Evaluated and compared four ML models on e-commerce spa transaction data to predict customer churn.

Customer Claims Prediction – Dunstan Insurance

- Built a classification model to predict horse insurance claims using customer history and behavioral patterns.

Education

MS **Jönköping University** , AI Engineering — 08/2023 – 06/2025

BE **Mangalore Institute of Technology and Engineering**, Computer Science — 03/2017 - 06/2021
